First Aid

What To Do If Someone Has A Non-Convulsive Seizure

(staring blankly, confused, not responding, movements are purposeless)

- 1 Stay with the person. Let the seizure take its course. Speak calmly and explain to others what is happening.
- 2 Move dangerous objects out of the way.
- 3 **DO NOT** restrain the person.
- 4 Gently guide the person away from danger or block access to hazards.
- 5 After the seizure, talk reassuringly to the person. Stay with the person until complete awareness returns.

What To Do If Someone Has A Convulsive Seizure

(characterized by stiffening, falling, jerking)

- 1 Stay calm. Let the seizure take its course.
- 2 Time the seizure.
- 3 Protect from injury. If necessary, ease the person to the floor. Move hard or sharp objects out of the way. Place something soft under the head.
- 4 Loosen anything tight around the neck. Check for medical identification.
- 5 **DO NOT** restrain the person.
- 6 **DO NOT** put anything in the mouth. The person will not swallow his or her tongue.
- 7 Gently roll the person onto his or her side as the convulsive seizure subsides to allow saliva or other fluids to drain away and keep the airway clear.
- 8 After the seizure, talk to the person reassuringly. Do not leave until the person is re-oriented. The person may need to rest or sleep.
